                                                                                                      ş
                                                                                                                                            밁
                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                 र्
                                                                                                                                                                                                                                                                                                                                                               (1g), comprising a first or second promoter-cistron pair consisting of a first or second promoter and cistron, respectively. The first cistron of the first promoter and cistron, respectively. The first cistron of cinitiation region (TIR-L) operably linked to a nucleic acid sequence encoding an Ig light chain and the second cistron of the second promoter-cistron pair comprises a second translational initiation region (TIR-H) operably linked to a nucleic acid sequence encoding an Ig heavy chain. Upon expression of the polynucleotide in a prokaryotic host cell, light and heavy chains are folded and assembled to form a biologically active Ig. The antibody of the invention is useful for disgnosing, treating or preventing diseases or conditions associated with abnormal expression and of activity of one or more antiogen molecules e.g. lymphoid malignancies, inflammatory, angiogenic, immunologic, neuronal, glial, astrocytal, hypothalamic or other glandular disorders. The present sequence represents the amino acid sequence of an anti-tissue factor (TF) heavy
                                                                                                                                                                                                                                                                                        Query Match

chain including a heat stable enterotoxin II (STII) secretion signal. This recombinant heavy chain is produced by host cells transformed with claimed vector pxFF-773FL (see ABER2272). The plasmid contains 2 translational units that temporally separate the transcription of the antibody light (see ABP72747) and heavy chains. Expression of the light chain is under the control of the phoa promoter, while expression of the heavy chain is under the control of the inducible Tacil promoter. In an example from the invention, Escherichia coli 60H4 was transformed with pxTF-7T3FL. The light chain was expressed initially and secreted into the periplasmic space. Heavy chain production was then induced by addition of IPTG A yield of 2.6 +/- 0.3 g/l assembled F(ab')2 was obtained, compared
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Producing an antibody for treating cancer or autoimmune diseases by culturing the host cell under suitable conditions so that the light and heavy chain are expressed in a sequential fashion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Peptide
                                                                                                                                                                                                                                                                                                                                       The present sequence is that of an anti-tissue factor (TF)
                                                                                                                                                                                                                                                                                                                                                                                              Claim 56; Fig 10; 73pp; English.

This is example of the process of the invention for production of recombinant antibodies in a host cell system, with temporally separated expression the light and heavy chains. Properly assembled, soluble and functional antibodies (or their fragments) can be produced in high yields for diagnostic or therapeutic applications, including treatment of cancer o autoimmune diseases

The invention provides a fused gene encoding a chimeric immunoglobulin light chain and a fused gene encoding a chimeric immunoglobulin heavy chain. The antibody of the invention is useful for treating an individual exposed to a rabies virus by administering to the individual a therapeutically effective amount of the antibody, and preventing a spread of the rabies virus to the central nervous system (CNS). The antibody of the invention provides a safe and efficacious post exposure prophylactic therapy for individuals exposed to a rabies virus

The recombinant antibodies are useful for preventing (vaccine) and treating an individual exposed to a pathogen, e.g. rabies infection. They are also useful for the qualitative and quantitative determination of the rabies virus. The sequences presented are the antibody protein fragments, the nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     region. Rables is an acute, neurological disease caused by infection of the central nervous system with that shies virus, a member of the Lyssavirus genus of the family Rhabdoviridae. Also disclosed are methods for producing an isolated recombinant antibody by culturing a host cell,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
hinge region polypeptide comprises: a wild-type human IgG1 immunoglobulir hinge region polypeptide; a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains 2 cysteine residues, where the first cysteine is not mutated; a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide contains no more than one cysteine residue; and a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains no cysteine residues. The binding domain-immunoglobulin fusion protein is
                                                                                                                                                                                                                                                                                                                                                                                                                    comprising a binding domain polypeptide that is fused to an immunoglobulin hinge region polypeptide, an immunoglobulin heavy clear constant region polypeptide that is fused to the hinge region polypeptide, and an immunoglobulin heavy chain CH3 constant region polypeptide, and an immunoglobulin heavy chain CH3 constant region polypeptide. The constant is fused to the CH2 constant region polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New binding domain-immunoglobulin fusion protein, useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, Grave's disease or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     17-JAN-2001; 2001US-0367358P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               binding domain-immunoglobulin fusion protein, a recombinant expression construct comprising the polynucleotide (operably linked to a promoter), a host cell transformed or transfected with a recombinant expression construct, producing the binding domain-immunoglobulin fusion protein, a pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein, a pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein or polynucleotide and a carrier, and treating a subject having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder. e.g. melanoma, carrinoma or sarcoma, rheumatoid arthritis, myasthenia gravis, Grave's disease, type I diabetes mellitus, multiple selectosis or autoimmune disease. The present sequence is a binding domain immunoglobulin fusion protein-associated protein sequence. Note: These sequence data for this patent formed part of the printed specification and is also available in electronic format directly from USPTO at sequence in the printed specification by their SEQ ID number therefore none of the sequences can be explicitly identified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

```

New binding domain-immunoglobulin fusion protein, useful for treating subject having or suspected of having a malignant condition or a B-cedisorder, e.g. melanoma, Grave's disease or autoimmune disease. a B-cell

WPI; 2003-801317/75.

Disclosure; SEQ ID NO 240; 157pp; English.

CC polypeptide, and an immunoglobulin heavy chain CH3 constant region (CC polypeptide that is fused to the CH2 constant region polypeptide. The hinge region polypeptide comprises: a wild-type human IgG1 immunoglobulin cC hinge region polypeptide; a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the first cysteine is not mutated; a mutated human IgG1 immunoglobulin hinge region polypeptide contains 2 cysteine residues, where the first cysteine is not mutated; a cc mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (c) having 3 or more cysteine residues, where the mutated human IgG1 cysteine residue; and a mutated human IgG1 immunoglobulin hinge region polypeptide contains no more than one cysteine residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide contains or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains or more cysteine residues; where contains the cysteine residues. The binding domain-immunoglobulin fusion protein is capable of at least one immunological activity comprising antibody dependent cell-mediated cytotoxicity (ADCC) and complement fixation. The binding domain polypeptide is capable of specifically binding to an antigen. Also included are an isolated polymucleotide encoding the binding domain-immunoglobulin fusion protein, a recombinant expression construct comprising the polynucleotide (operably linked to a promoter), a host cell transformed or transfected with a recombinant expression construct, producing the binding domain-immunoglobulin fusion protein, a pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein or polynucleotide and a carrier, and treating a subject having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, carcinoma or sarcoma, rheumatoid arthritis, myasthenia gravis, Grave's disease, type I diabetes mellitus, multiple sclerosis or autoimmune disease. The present sequence is a binding domain treating a malignant condition or a B-cell disorder. -immunoglobulin fusion protein-associated protein sequence. Note: sequence data for this patent formed part of the printed specific comprising a binding domain polypeptide that is fused to an immunoglobulin hinge region polypeptide, an immunoglobulin heavy immunoglobulin hinge region polypeptide that is fused to the hinge region CH2 constant region polypeptide that is fused to the hinge region The invention relates to a binding domain-immunoglobulin comprising a binding domain polypeptide that is fused to format directly specification fusion protein chain

                                                                                          Ś
                                                                                                                                                                                                                                                   CC monoclonal mouse anti-IFN gamma antibody D910; a multivalent antibody; CC or a ruminant antibody. The antibody are also useful for determining CC IISH gamma levels in a sample. Two fusion cDNA genes encoding heavy and CC light chain fusion proteins of the humanised D910 antibody were CC constructed. The light chain comprised cDNA genes encoding the mouse D910 clight chain and a human CC comprised cDNA encoding the mouse D910 light chain and a human CC comprised cDNA encoding the mouse D910 light chain leader sequence CC followed by the humanised D910 havy chain variable domain and a human CC comprised cDNA encoding the mouse D910 light chain leader sequence CC followed by the humanised D910 hight chain leader sequence. This CC was then subsequently amplified using two primers (AAX08589, AAX08590) to generate PCR-V fragment. The humanised heavy chain variable domain was CC amplified from pGEM-T-VhH using two primers (AAX08591, AAX08592) to generate PCR-VI fragment. The humanised heavy chain variable domain was CC amplified with two primers (AAX08591, AAX08592) to generate PCR-VI fragment. The humanised heavy chain constant domain was CC amplified with two primers (AAX08593, AAX08591) and then cloned CC give pGEM-T to give pGEM-Tayle. The humanised meavy chain constant domain was CC amplified with two primers (AAX08593, AAX08594) and then cloned CC give pGEM-Tch. Two separate PCR amplifications were then performed using CC pGEM-T-Ch as a template. The primers was devere AAX08598, AAX08599, to generate PCR-VIII fragment and AAX08597, AAX08598, AAX08599, CC CAAX08500 and the resulting PCR-X fragment inserted into pGEM-Tch to generate PCR-IX fragment and AAX08597, AAX08599, AAX08599, CC CAAX08500 and the resulting PCR-X fragment inserted into pGEM-GCVH to generate PCR heavy chain fusion DNA in a vector dealganted dealganted CC constant heavy chain fusion DNA in a vector dealganted dealganted CC constant heavy chain fusion DNA in a vector dealganted constant constant constant constant inserted into pGEM-GCVH.
                                                                                                                                                   Query Match

The antibody is selected from a single chain antibody (scFv), a chimeric antibody or diabody comprising the humanised variable domain of the monoclonal mouse anti-IFN gamma antibody D9D10; a multivalent antibody; or a ruminant antibody. The antibodies are also useful for determining IFN gamma levels in a sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New engineered antibodies which bind and neutralise interferon-gamma - useful for prevention and treatment of septic shock, cachexia, immune diseases and skin disorders.

; Sequence 4, Application US/09766995
; Patent No. US20020052481A1
; GENERAL INFORMATION:
; APPLICANT: Graham P. Allaway et al.
TITLE OF INVENTION: NON-PEPTIDYL MOLETY-CONJUGATED CD4
TITLE OF INVENTION: AND USES THEREOF
; FILE REFERENCE: 2048/41215-CB/JPW/SHS
; CURRENT APPLICATION NUMBER: US/09/766,995
; CURRENT APPLICATION NUMBER: US/09/766,995
; CURRENT FILING DATE: 2001-01-22
; NUMBER OF SEQ ID NOS: 9
; SOFTWARE: PatentIn version 3.0
; SEQ ID NO 4
; LENGTH: 530
; TYPE: PRT
; ORGANISM: homo sapians
                                                                                                                                                                                                                                                                                                                                                                                             ð
                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                   S

Patent No. US20020001798A1

GENERAL INFORMATION:

APPLICANT: BRAMS, PETER

APPLICANT: MORROW, PHILLIP

TITLE OF INVENTION: NEGRALIZING HIGH AFFINITY HUMAN MONOCLONAL ANTIBODIES

TITLE OF INVENTION: SPECIFIC TO RSV F-PROTEIN AND METHODS FOR THEIR

TITLE OF INVENTION: MANUFACTURE AND THERAPEUTIC USE THEREOF

FILE REFERENCE: 037003-0275759

CURRENT APPLICATION NUMBER: US/09/740,002

CURRENT APPLICATION NUMBER: 09/335,697

PRIOR APPLICATION NUMBER: 09/335,697

PRIOR FILING DATE: 1999-06-18

PRIOR FILING DATE: 1999-06-18

PRIOR APPLICATION NUMBER: 08/488,376

PRIOR FILING DATE: 1995-06-07

NUMBER OF SEQ ID NOS: 27

SOFTMARE: Patentin Ver. 2.1

SEQ ID NO 25
